## Executive Summary

Accidental release prevention and emergency response policies:

ColArt Americas, Inc. (ColArt) has developed a written accidental release prevention program under the New Jersey Department of Environmental Protection's (NJDEP) Toxic Catastrophe Prevention Act (TCPA) Program and the US Environmental Protection Agency's Risk Management Plan. This written program establishes safety procedures associated with the covered aerosol storage process operated at the facility.

Stationary source and regulated substances handled:

ColArt an artist paint and supplies storage and distribution warehouse located in Piscataway, New Jersey. The ColArt facility receives, stores, and packages for distribution various art supplies including small containers, spray cans, tubes containing paints, and other art based supplies. No bulk liquid transfer operations such as those requiring piping, pumping, or bulk storage containers are conducted at this facility. This Risk Management Plan (RMP) for the ColArt Facility covers the Aerosol Storage and Distribution process which includes aerosols that use a flammable gas (dimethyl ether or butane) as a propellant.

General accidental release prevention program and chemical-specific prevention tips:

The Facility complies with applicable codes and recognized and generally accepted good engineering practices (RAGAGEP) for the design, construction, and maintenance of the aerosol storage location. Applicable aerosols are stored in a designated, fenced location within the warehouse with controlled access and a sprinkler system. In addition, if an emergency were to occur, the Facility maintains an Emergency Action Plan (EAP) and coordinates response activities with the Piscataway Township Fire Prevention Bureau periodically.

Five-year accident history:

There have been no accidents or releases in the past five-years that meet the reporting criteria.

Emergency Response Program:

In an emergency, ColArt employees do not perform emergency response activities. The facility's alarm system (maintained by EPIC Security) would alert the fire department and employees are trained to evacuate. The Bureau of Fire Prevention (Piscataway, NJ) has inspected the facility and is asked to participate in response activities periodically.

Planned changes to improve safety:

The facility has completed an initial Process Hazard Analysis and conducts annual audits of the RMP program. An action plan has been developed and plans are in place to resolve audit findings.
